XI-Physics, Chapter# 5, Page# 27

MULTIPLE CHOICE QUESTIONS (MCQs) (1) The unit of angular momentum are:

(1)	The unit of angular momentum are:			
	* Newton sec			
(2) The physical quantity which produce angular acceleration is called:				
	* Work			
(3)	Two forces which are equal in magnitude but opposite in direction and no			
	acting on the same line constitute a:			
	* Circle * Couple * Power * Force			
(4)	A body may be in equilibrium when:			
	* It is in motion *It is at rest			
	* It is moving with a uniform acceleration			
ngg sji	* It is moving with variable velocity			
(5)	The rate of change of angular momentum is equal to the: (2010)			
	* Force exerted on the body * Torque			
	* Force exerted by the body * Angular momentum			
(6)	Every point of a rotating rigid body has the same:			
ęw. Pr	* Linear velocity * Linear momentum			
. 1 *	* Angular velocity * Linear acceleral			
(7)	The dimension of the angular momentum is: (2010)			
	* ML^2T^{-1} * $ML^{-1}T^{-2}$ * ML^2T^{-2} * ML^2T^{-3}			
(8)	When the net torque acting on a system is zero which of the following will be			
	constant:			
	* Force * Angular momentum			
	* Linear momentum * * Angular velocity			
(9)	Torque is defined as:			
- 0.42°	* Time rate of change of linear velocity			
•	* Time rate of change of angular velocity			
	* Time rate of change of linear momentum			
	* Time rate of change of angular momentum			
(10)	The centre of mass of a system of particles:			
e 5,	* Coincides with C.G * Does not coincides with C.G			
	* Coincides with C.G in the uniform gravitational field * Non of these			

	XI-Physics, Chapter# 5, Page# 28
(11) The angular momentum is the cross p	
* Linear velocity	* Linear momentum
* Linear acceleration	* None of these
(12) The dimension of torque are:	
* ML^2T * ML^2T^2	$*ML^2T^{-2}$ $*MLT^2$
(13) Which of the following as a spin moti	on:
* The motion of the plants round the s	um
* The motion of electron round the nu	cleus
* The motion of the moon round the e	arth
* The daily rotation of earth causing d	ay and night
(14) The torque acting on a body is given b	y:
$* \frac{1}{2} x (\vec{r} \times \vec{F}) \qquad * \vec{r} \times \vec{F}$	* $\vec{r} \times \frac{1}{2} \vec{F}$ * $\vec{F} \times \vec{r}$
(15) For maximum torque the angle between	en \vec{r} and \vec{F} should be equal to:
* 0°	* 45° * 90°
(16) Conventionally anti-clockwise torque	is taken as:
* Positive * Negative	* Zero * None of these
(17) The term torque is also known as:	
* Momentum of inertial	* Angular velocity
* Momentum of force	* Couple
(18) Angular momentum is measured as:	
* rF	* rP Sin θ * rP Tan θ
(19) The S.I unit of angular momentum is:	
* g m/sec * kg m/sec	* kg m ² /sec * kg m ² /sec ²
(20) The total weight of body acts at:	
* Its centre	* Its centre of gravity
* Its two point	* Many points
(21) A body is said to be in state of complete	그 중요 그는 사람들은 사람들이 되었다. 그 사람들은 사람들은 사람들은 사람들이 되었다.
* Its rotational acceleration is zero	oquinorium II.
* Its translational acceleration is zero	
* Its linear managed was a state of the stat	ation zero
* Its linear momentum is zero	

Xi-Physics, Chapter# 5, Page# 29

(22) A body will be in rotational equilibrium if:
* $\Sigma \vec{F} = 0$
(23) A body will be in translational equilibrium if:
* $\Sigma \vec{F} = 0$
(24) The first condition for equilibrium of a body is that the:
* Velocity be zero
* Vector sum of all the forces be zero * Vector sum of all the torques be zero
(25) The second condition for equilibrium of a body is that the:
* Velocity be zero * Acceleration be zero
* Vector sum of all the forces be zero * Vector sum of all the torques be zero
(26) Let torque $\vec{r} = \vec{r} \times \vec{F}$. The direction of torque is:
* In the direction of \vec{r} * In the direction of \vec{F}
* Opposite to the direction of F * Normal to the plane containing r x F
(27) Two equal and opposite forces acting on a body form a:
* Linear momentum * Torque
(28) For the angular momentum of a system to remains constant the external torque
should be:
* Small * Large * Zero * None of these
(29) The direction of torque and angular momentum is determine by the:
* Left hand rule * Right hand rule * Addition of vector * None of these
(30) The torque and angular momentum are related to each other by the expression:
* $\vec{\tau} = \vec{L} \times t$
(31) If the axis of a rotating body passes through the body itself, then it's motion is
called:
* Linear motion
* Spin motion
32) The magnitude of torque due to couple depends on:
* The distance of (\vec{F}) from origin * The distance of $(-\vec{F})$ from origin
* The distance between \vec{F} and $-\vec{F}$ * None of these

XI-Physics, Chapter# 5, Page# 30

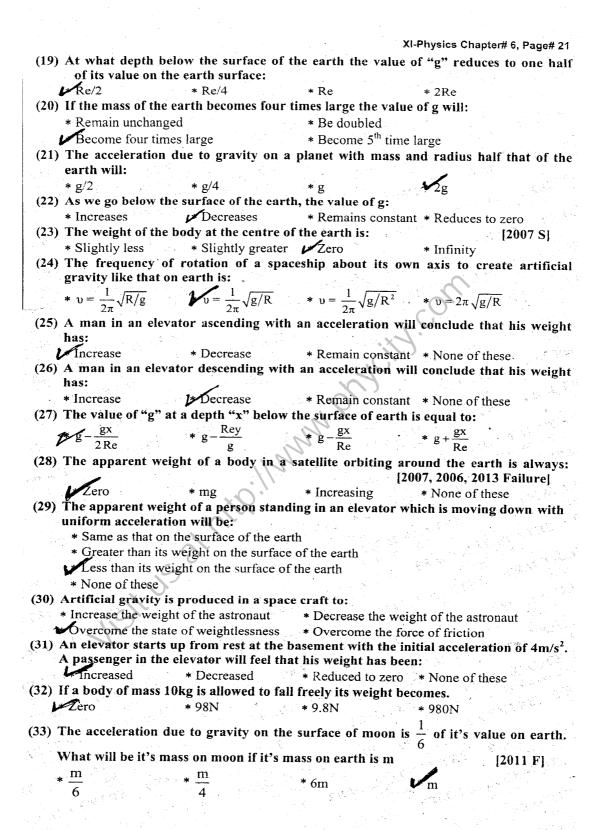

ANSWER KEY

(1) Joule sec	(2) Torque	(3) Couple
(4) It is at rest	(5) Torque	(6) Angular velocity
$(7) ML^2T^{-1}$	(8) Angular momentum	(9) Time rate of change of angular momentum
(10) Coincides with C.G in the uniform gravitational field	(11) Linear momentum	(12) ML ² T ⁻²
(13) The daily rotation of earth causing day and night	(14) řxř	(15) 0°
(16) Positive	(17) Momentum of force	(18) rP Sin 0
(19) kg m ² /sec	(20) Its centre of gravity	(21) Its rotational and translational acceleration zero
$(22) \Sigma \vec{r} = 0$	$(23) \sum \vec{F} = 0$	(24) Vector sum of all the forces be zero
(25) Vector sum of all the forces be zero	(26) Normal to the plane containing $\vec{r} \times \vec{F}$	(27) Couple
(28) Zero	(29) Right hand rule	$(30) \vec{r} = \frac{\vec{L}}{t}$
(31) Spin motion	(32) The distance between \vec{F} and $-\vec{F}$

XI-Physics Chapter# 6, Page MULTIPLE CHOICE QUESTIONS (MCQs)

(1)	The time period of	wioon around the	earth is:		[2003]
	* 29 days	* 30 days	27.3 days	* 28.29 days	
(2)	If the distance between		loubled the gravitation	onal force betwe	en them is:
	* One third	ne fourth	* Two time	* Three time	
(3)	G is called:		1 WO tillio	Timee time	
	Gravitational cons	tant	* Gravitational ac	realeration	•
	* Force of Gravitation		* Gravitational re		i wa
(4)		The state of the s	* Gravitational re	action	
	$6.673 \times 10^{-11} \text{ Nm}^2$			-2 n - 2	
	* $8.67 \times 10^{-11} \text{ Nm}^2/\text{k}$		* 7.67 x 10 ⁻¹¹ Nn * 9.67 x 10 ⁻¹¹ Nn	n /Kg	
(5)		g	* 9.6 / X 10 " Nn	n ⁻ /kg ⁻	
(3)	The weight of a 60l			1 be:	
-	* 588N	* 98N	* 60N	Zero	[2006 F]
(6)	The mass of the ear	th can be calculat		(0)	
115.6	* Reg	$\frac{Re^2g}{G}$	* $\frac{\text{Reg}^2}{\text{G}}$	Re^2g^2	
- 1 ·	G			G	
(7)	The average densit	y of the earth is ed	14*******	_ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \	
4 1	$* 2500 \text{ kg/m}^3$	$*,5000 \text{ kg/m}^3$	3500 kg/m ³	* 5600 kg/m	3
(8)	The force of gravita	ition between two	bodies 1m apart and	each of 1000kg	is:
	* $6.67 \times 10^{-11} \text{N}$	$*6.67 \times 10^{5} \text{N}$	$6.67 \times 10^{-5} \text{N}$	* 6.67 x 10 ⁻⁶	'n
(9)	The mass of the ear	rth comes out to b	e:		
1	6.67 x 10 ¹³ kg	$*6.025 \times 10^{23} \text{kg}$	* 1.6 x 10 ¹⁹ kg	$*6 \times 10^{24} \text{kg}$	
	The magnitude of t				
. 40	* G $\frac{m_1 m_2}{r}$	r^2	$*g \frac{m_1 m_2}{r}$	* g $\frac{m_1 m_2}{r^2}$	n in the a
(11)	702				001
\cdot (11)	I ne acceleration di	te to gravity on th	e surface of earth ca	n de calculated	
(11)	The acceleration di	ue to gravity on th	e surface of earth ca	n de caiculated	as.
(11)	I he acceleration di $\frac{Me}{Re^2}$	te to gravity on the $* G \frac{Me^2}{Re^2}$	* G Me ²	* $G \frac{Me}{Da}$	as.
	$G \frac{Me}{Re^2}$	* $G\frac{Me^2}{Re^2}$	$* G \frac{Me^2}{Re}$	* $G\frac{Me}{Re}$	as.
	$G \frac{Me}{Re^2}$	* $G\frac{Me^2}{Re^2}$ height "h" from t	* $G\frac{Me^2}{Re}$ the surface of the ear	* $G\frac{Me}{Re}$ th is equal to:	as.
	The acceleration did $G \frac{Me}{Re^2}$ The value of "g" at $g - \frac{2gh}{Re}$	* $G\frac{Me^2}{Re^2}$ height "h" from t	* $G\frac{Me^2}{Re}$ the surface of the ear	* $G\frac{Me}{Re}$	as.
(12)	$G \frac{Me}{Re^2}$ The value of "g" at $g - \frac{2gh}{Re}$	* $G \frac{Me^2}{Re^2}$ height "h" from t * $g + \frac{2gh}{Re}$	* $G \frac{Me^2}{Re}$ the surface of the ear * $g - \frac{gh}{Re}$	* $G \frac{Me}{Re}$ * th is equal to: * $g - \frac{gh}{Re^2}$	
(12)	G $\frac{Me}{Re^2}$ The value of "g" at $g - \frac{2gh}{Re}$ If a man goes to a	* $G \frac{Me^2}{Re^2}$ height "h" from t * $g + \frac{2gh}{Re}$ height equal to t	* $G \frac{Me^2}{Re}$ the surface of the ear * $g - \frac{gh}{Re}$ he radius the earth	* $G \frac{Me}{Re}$ * th is equal to: * $g - \frac{gh}{Re^2}$	ce his weight
(12)	$G \frac{Me}{Re^2}$ The value of "g" at $g - \frac{2gh}{Re}$	* $G \frac{Me^2}{Re^2}$ height "h" from t * $g + \frac{2gh}{Re}$ height equal to t	* $G \frac{Me^2}{Re}$ the surface of the ear * $g - \frac{gh}{Re}$ he radius the earth es:	* $G \frac{Me}{Re}$ Th is equal to: * $g - \frac{gh}{Re^2}$ from its surface	
(12) (13)	G $\frac{Me}{Re^2}$ The value of "g" at $g = \frac{2gh}{Re}$ If a man goes to a relative to that of example 1.	* $G \frac{Me^2}{Re^2}$ height "h" from t * $g + \frac{2gh}{Re}$ height equal to t arth would becom	* $G \frac{Me^2}{Re}$ the surface of the ear * $g - \frac{gh}{Re}$ he radius the earth es: * $2W$	* $G \frac{Me}{Re}$ * th is equal to: * $g - \frac{gh}{Re^2}$ from its surface	ce his weight [2011]
(12) (13)	G $\frac{Me}{Re^2}$ The value of "g" at $\sqrt{g} - \frac{2gh}{Re}$ If a man goes to a relative to that of example $\frac{*W}{2}$ If the radius of the	* $G \frac{Me^2}{Re^2}$ height "h" from t * $g + \frac{2gh}{Re}$ height equal to t arth would becom * W	* $G \frac{Me^2}{Re}$ the surface of the ear * $g - \frac{gh}{Re}$ he radius the earth es: * $2W$ rink and its mass w	* $G\frac{Me}{Re}$ Th is equal to: * $g - \frac{gh}{Re^2}$ from its surface * $W/4$ where to remain to	ce his weight [2011]
(12) (13)	The value of "g" at $g - \frac{2gh}{Re}$ If a man goes to a relative to that of example $W/2$ If the radius of the acceleration due to	* $G \frac{Me^2}{Re^2}$ height "h" from t * $g + \frac{2gh}{Re}$ height equal to t arth would becom * W e earth were to sh gravity on the sur	* $G \frac{Me^2}{Re}$ the surface of the ear * $g - \frac{gh}{Re}$ he radius the earth es: * $2W$ rink and its mass w	* $G\frac{Me}{Re}$ th is equal to: * $g - \frac{gh}{Re^2}$ from its surface * $W/4$ ere to remain to	e his weight [2011] the same the
(12) (13) (14)	The value of "g" at $g - \frac{2gh}{Re}$ If a man goes to a relative to that of example $W/2$ If the radius of the acceleration due to $W/2$	* G Me ² /Re ² height "h" from t * g + 2gh/Re height equal to t arth would becom * W e earth were to sh gravity on the sur * Remain the san	* $G \frac{Me^2}{Re}$ the surface of the ear * $g - \frac{gh}{Re}$ he radius the earth es: * $2W$ rink and its mass w face of the earth will ne * Increase	* G Me/Re * th is equal to: * g - gh/Re² from its surfact * W/4 ere to remain its * None of the	ee his weight [2011] the same the
(12) (13) (14)	The value of "g" at $g - \frac{2gh}{Re}$ If a man goes to a relative to that of example $W/2$ If the radius of the acceleration due to	* G Me ² /Re ² height "h" from t * g + 2gh/Re height equal to t arth would becom * W e earth were to sh gravity on the sur * Remain the san	* $G \frac{Me^2}{Re}$ the surface of the ear * $g - \frac{gh}{Re}$ he radius the earth es: * $2W$ rink and its mass w face of the earth will ne * Increase	* G Me/Re * th is equal to: * g - gh/Re² from its surfact * W/4 ere to remain its * None of the	ee his weight [2011] the same the ese dius:
